## Cellophane wrapping machine

### Automatic fold wrapping machine for overwrapping of single piece goods

The excellent cellophane wrapping machine for band and full wrapping at high speeds of up to 300 packages per minutes. The fold wrapping machine is used for the primary packaging of food and non-food articles as well as for the secondary packing of boxes, trays, blocks or other round or rectangular shaped types of packing goods.

For band wrapping only, the machine is available in the LCM-B version.

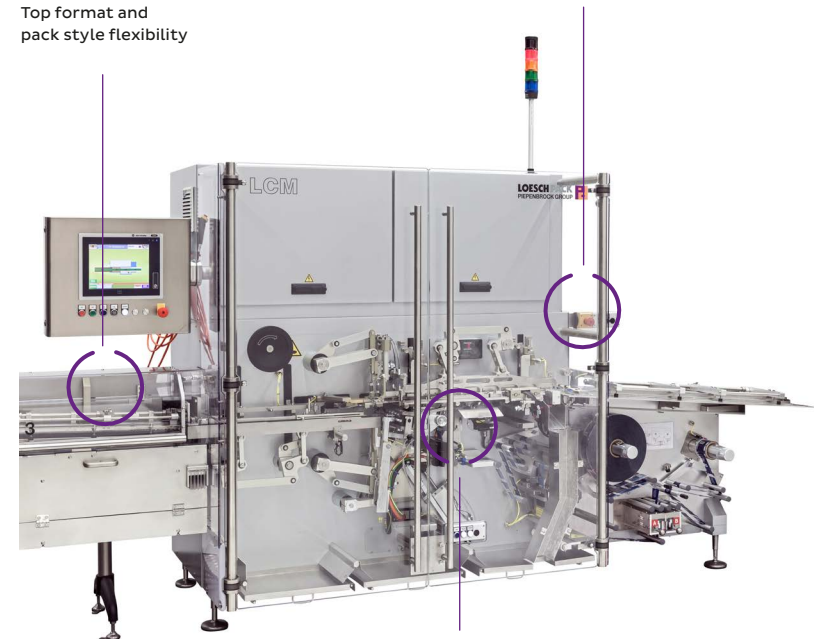

### Performance and efficiency

- > Well-established, solid machine design
- > Cam-controlled with central lubrication
- > Computer optimized and special hardened cams
- > Very high indifference to packaging material variations through gripper feeding
- > Wide size range
- > Modular built, robust machine construction in front plate design
- > Excellent wrapping quality
- > Multipacks possible
- > Tear thread with gripping end for easy opening
- > Extremely tight package
- > Very fast, easy changeover
