## Fold wrapping machine

### Automatic high performance fold wrapping machine for traditional chewing gum single sticks

The excellent packaging machine for fold wrapping single sticks at highest speeds of up to 2,500 sticks per minute. The machine is used for wrapping of single chewing gum sticks and for making multipacks or outputting for further wrapping in carton multipacks.

#### Performance and efficiency

- > Manual or semi-automatic slab feeding device
- > Continuously running slit, collector, and optional pack drum for single stick and optional multipack
- > Continuous feeding of packing material via servo pickoff with rotating cutting device
- > Consumption-optimised design of all drives. Machine design condensed to a minimum
- Front plate design with full separation of drive and product feeding areas
- > Large touch panel for full visualization of all functions and machine states
- > Flexible for traditional multipacks and modern carton multipacks
- > Highest speeds of 2,500 sticks/min. with high efficiency
- > Excellent single stick packing with zigzag or straight cut
- > Use of different flavours
- > Combination with semi-automated product feeding systems
- > Fully automatic cut&wrap feeding possible
- > High hygienic and ergonomic standard
