

GWT

Fold wrapping machine

Automatic high performance fold wrapping machine for TabGum (mini sticks)

The excellent packaging machine for fold wrapping TabGum sticks at highest speeds of up to 2,500 sticks per minute. The machine is used for wrapping of single sticks which are then grouped in layers and passed on for further packing. The GWT can be perfectly combined with Loesch multipack cartoning machines or form fill and seal machines for secondary packaging. This makes it possible to realize all commercially available packaging styles for chewing gum tabs.

Performance and efficiency

- > Highest speeds of up to 2,500 sticks per minute
- > High availability due to inherently safe design (fast “trouble shooting”)
- > Manual, semi-automated slab feeding device or fully automated feeding with storage device as a complete system solution (optional)
- > Depending on application: Operation with “separator rollers” instead of “breaking reel” to separate the single sticks (especially for the operation with “multi-layer gum”)
- > Continuously running wrapping head and feeding of packing material
- > Depending on application: Interface module for downstream LoeschPack multipack cartoning machines and display cartoning machines (also “in-line” configurations feasible)
- > High flexibility in the grouping section (3–8 Tab Gums)

Top performance for TabGum packaging

Consistently excellent packaging quality

High speeds of up to 2,500 sticks per minute

Ideal system component when combining machines for innovative multipacks

Flexible processing of various chewing gum degrees of hardness
