

LRM-DUO

Twin-station fold wrapping machine

Automatic twin station high performance fold wrapping machine for chewing gum multipacks

Target applications are smaller multipacks for classical chewing gum sticks and mini sticks (TabGum). The pre-grouped products are first packed in diverse cardboard box multipacks and then wrapped in tightly sealed cellophane. The LRM-DUO is the flexible, twin station fold wrapping machine at high speeds of up to 230 multipacks per minute.

Performance and efficiency

- > Modular, twin station fold wrapping machine, designed for the specific requirements of carton multipacking of chewing gum
- > Matching feeding modules for stick gum and tab gum with or without "belly band", optionally with stacking station according to the upstream primary packing machines
- > Robust machine construction in front plate design
- > Large touch panel for full visualization of all functions and machine states
- > High speeds of up to 230 cellophaned carton multipacks a minute with high efficiency
- > Direct combination with Loesch primary packing machines for chewing gum products
- Various feeding systems according to the application
- > Excellent product protection with optional hermetically sealed packaging
- > High flexibility for diverse pack formations with simple format changeover
- > High hygienic and ergonomic standard

Maximum product protection and performance in this segment

High performance for up to 230 multipacks per minute, with maximum efficiency

Stands out with innovative multipacks

Cartoning and cellophane sealing on a compact platform
