

LTM-DUO Combiline

Three-stage bar packaging system

From the chocolate bar into the box on a combined line.

Designed for efficient and flexible production, the LTM-DUO Combiline for fold wrapping and cartoning of chocolate tablets meets every requirement, particularly with regard to packaging quality and product protection. At high speeds of up to 215 chocolate tablets a minute, the tablets are first wrapped in an inner wrap of foil, before an outer wrap made of paper or cardboard is applied. The compact CMW cartoning module, which can be perfectly combined with the LTM-DUO, then produces up to 30 display cartons per minute. The result is a space-saving, efficient and unique system solution for packaging the best chocolate in the world - yours!

Performance and efficiency

- > Highest output performance with excellent efficiency and availability.
- > The entire system is run by a shared control system and a single HMI, therefore, just one machine operator is required.
- > Compact, space-saving design thanks to inline arrangement of the Combiline e.g. Integration of the control cabinet.
- > Many standard pack styles for primary and secondary packing and cartoning available.
- > Excellent flexibility for a wide range of pack styles and carton variants.
- > Rapid and easy size changeovers with a safe restart.
- > Hygienic design with consistent front plate design and clear separation of drive and functional elements.
- > Ideal ergonomics and accessibility throughout the line. Fully operational from one side.
- > Long maintenance intervals with excellent accessibility.
