

LTM-DUO

Twin-station fold wrapping machine

Twin-station fold wrapping machine for packaging chocolate tablets

Designed for efficient and flexible production, the LTM-DUO for fold wrapping of chocolate tablets meets every requirement, particularly with regard to packaging quality and product protection. At high speeds of up to 215 chocolate tablets a minute, the tablets are first wrapped in an inner wrap of foil, before an outer wrap made of paper or cardboard is applied. The LTM-DUO is just as flexible when it comes to the packaging material or the seal as it is in terms of sizes – where everything from a small bar to a 300 g tablet is possible.

Performance and efficiency

- > Excellent product protection and packaging quality
- > Hermetically sealed inner wrap – comparable with flow packs
- > Various types of folding and closing
- > Use of different packaging materials
- > Minimized number of size parts with fixed stops for easy size changeover
- > Quick and easy format changeovers and packaging material changes
- > Gentle product handling thanks to continuous conveyor belts
- > Top hygienic and ergonomic standard thanks to complete separation of drive and product areas
- > Higher line efficiency due to optimal integration of buffer systems
- > Simulation of the packaging line with Plant Simulation
- > Ideally harmonized packaging systems from a single source – from the feeding to the display carton

New HMI generation:
Loesch **easyMI**

Use of bio-degradable
packaging material

Ideal as part of the
LTM-DUO Combiline –
from bar to box

Performance: up to 215
tablets per minute

Ideal product protection thanks
to sealed primary wrap

Ultimate overall performance
with two-stage fold wrapping
