

# LTM-DUO Combiline

## Three-stage bar packaging system

From the chocolate bar into the box on a combined line. The LTM-DUO combination line is designed for fold-wrapping and cartoning chocolate bars, with a focus on consistent packaging quality and reliable product protection. At outputs of up to 215 chocolate bars per minute, the bars are first wrapped with an inner film wrap and then provided with an outer wrap made of paper or carton.

The compact CMW cartoning module, matched to the LTM-DUO, produces up to 30 display cartons per minute. This creates a coordinated system solution for packaging your chocolate bars.

### Functional and design features

- > High throughput and efficient processes in the three-stage packaging operation
- > The complete line features a shared control system and a central HMI; operation is designed for a single operator
- > Compact design thanks to the integration of line components
- > Implementation of common pack styles for primary, secondary and outer packaging/cartoning
- > High flexibility for different pack styles and carton variants
- > Fast, simplified format changeover with a safe restart
- > High hygiene and ergonomic standards through separation of the drive and product areas
- > Good ergonomics and accessibility of the complete line
