

LTM-DUO

Twin-station fold wrapping machine

The LTM-DUO is a two-stage fold-wrapping machine for packaging chocolate bars. It is designed for flexible production with outputs of up to 215 bars per minute. In the first step, the products receive an inner wrap made of film, followed by an outer wrap made of paper or carton. The machine supports various packaging materials, sealing types and formats, making it suitable for a wide range of applications in chocolate packaging. From small formats up to 300 g bars, different product sizes can be processed on a single machine. The combination of a two-stage packaging process, format flexibility and material-appropriate processing supports premium-quality packaging with product-specific, tailored protection.

Functional and design features

- > Tightly sealed inner wrap for application-specific product protection
- > Modular product infeed and article separation with splitted conveyors to discharge broken pieces
- > Various types of folding and closing
- > Use of different packaging materials
- > Format changeovers and packaging material changes with low changeover effort
- > Gentle product handling thanks to continuous conveyor belts
- > Separation of drive and product areas
