

# LTM

## One-station fold wrapping machine

### One-station fold wrapping machine for packaging chocolate tablets

The LTM allows a simple and economic entry into wrapping chocolate bars perfectly. This flexible wrapping machine operates in a performance range up to 180 products per minute. It primarily is designed for packing chocolate bars and chocolate tablets, as well as other rectangular shaped confectionery. Contrary to two-staged machines the LTM handles two different packing materials in just one step and enables an utterly slender, space-saving and efficient footprint.

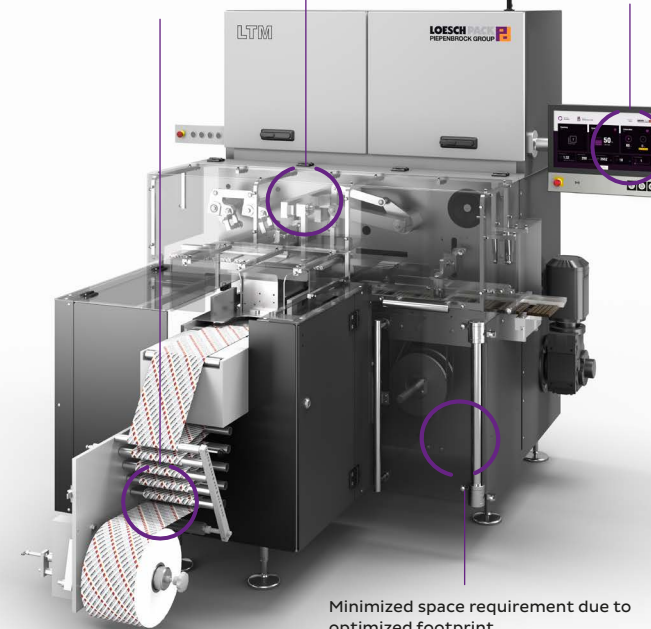

### Performance and efficiency

- > Minimized number of format parts with fixed limit stops, for simple replacement: high efficiency and maximum flexibility
- > Modular product infeed and article separation with splitted conveyors to discharge broken pieces
- > Wrapping material pickoff with automatic splice device (option)
- > Excellent product protection through an outstanding wrapping quality
- > Optimized, special hardened cams, with central lubrication
- > Accessibility to all areas for simple and rapid cleaning and maintenance
- > Integrated control cabinet for a smaller footprint
- > Top hygienic and ergonomic standard thanks to complete separation of drive and product areas
- > Combination with semi- or fully-automated product feeding systems by LoeschPack
- > Equipment from a single source: combined with the Display Cartoner CMW, results in a space-saving and cost-oriented layout of machinery

Processing of two packing materials on one station

High packaging and format flexibility with low setup costs

Attractive price-performance ratio

Minimized space requirement due to optimized footprint
