

RCB-HS | RCB-H

Wrapping head machine

Primary packaging of small chocolate items, bars and small tablets in a fold wrap.

The RCB-HS packaging machine combines the benefits of a traditional die-fold machine and a flow wrapping machine on a single platform. It can produce hermetically sealed packs at a speed of up to 600 products a minute – with the premium look of a fold wrap. The RCB-HS is used wherever exacting demands relating to the look of the packaging accompany high tightness requirements. Thanks to its extremely compact design, the wrapping head machine has a very small footprint at its place of use. The machine is also available in the RCB-H variant for small bars. Both types of machines can create open folds in addition to the tightly sealed packaging variant.

Tight as a flow pack, but with the premium look of a fold wrap

Efficiency, flexibility and performance

- > Many machine and pack style variations possible
- > Short format changeover times of about one hour
- > Fast and reproducible format changeover
- > Little cleaning and maintenance effort
- > No need for hot melt to seal the packs
- > Sealing operations only foil against foil – no product contact
- > Use of just one packaging material
- > Largely toolless format changeover and belt change
- > High format flexibility
- > Hygienic and space-saving design
- > Optimized accessibility for operation, maintenance and cleaning
- > Ideal system component in line combination with downstream equipment from LoeschPack, with perfect system integration

Maximum availability thanks to short and toolless size changeovers and minimised start-up issues

No hot-melt needed to seal package

Many machine and pack style variations possible

Performance of up to 600 products per minute – hermetically sealed

Sealing operation only foil against foil – no product damage
