

RCB

Wrapping head machine

The RCB wraps chocolate bars, mini tablets and napolitains in a premium look while at the same time ensuring a high level of product protection against environmental influences. It thus combines the advantages of a classic fold-wrapping machine with those of a flow-wrapping machine. Using a single wrapping head, the machine variant RCB-HS produces hermetically sealed products at speeds of up to 600 products per minute and seals the packaging material all around with heat. The sealing jaws always seal film to film, ensuring a high tightness of the package. Folding elements then create the classic fold wrap. The RCB is also available as the RCB-H with a larger format range. In this version, it also wraps mini tablets at speeds of up to 450 products per minute. As the RCB-S variant, the system is capable of wrapping up to 800 products per minute in an open fold wrap.

Functional and design features

- > Several machine and pack-style variants possible
- > Short format changeover times of around one hour
- > Fast and reproducible format changeover
- > Low cleaning and service effort
- > Sealing operations only packaging material to packaging material, no product contact
- > Tool-free installation and removal of belts for faster cleaning
- > High format flexibility
- > Hygienic, space-saving design
- > Optimal accessibility for operation, maintenance and cleaning
