## Roll wrapping machine

### Compact wrapping machine for roll packs

Format-flexible and extremely compact roll wrapping system for packing round wine gums, compressed and sugar-coated products in the medium performance range of up to 200 packs a minute. This new system, designed for the medium performance range, is based on many decades' experience of manufacturing roll wrapping machines and complies with all standards of modern, economical and efficient confectionery production.

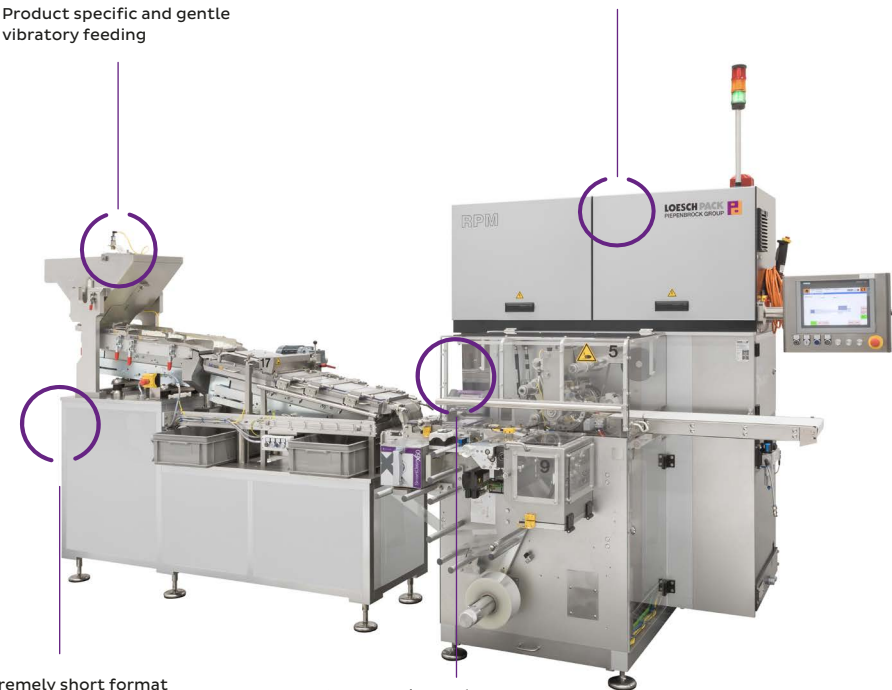

Most attractive price-performance ratio

### Performance and efficiency

- > Extremely short format changeover times of under one hour within one size range
- > Optional autosplice guarantees maximum availability
- > Long service intervals
- > Gentle product handling by consequent reducing of touching points
- > Easy machine adjustment to different packaging materials by servo driven packaging material infeed
- > Outstanding maintenance and operating accessibility by hinged and sliding elements
- > Top hygienic and ergonomic standard
- > Space-saving and compact modular design

Product specific and gentle vibratory feeding
