

FHW-S

High Performance HFFS

The horizontal flow-wrapping machine FHW-S from the LoeschPack F-Series is designed for efficient packaging of products in bar or tablet form. Its modular machine concept supports a range of product and infeed configurations and is suitable for unwrapped or pre-wrapped products, whether fed individually or arranged in groups. In the performance version, the FHW-S processes up to 2,100 products per minute at film speeds of up to 205 meters per minute. The machine is designed for three-shift operation and can be combined with product-specific, coordinated feeding units. This creates an integrated packaging system for performance-driven applications, offering high process stability and flexibility in product feeding.

Up to 2,100 products per minute are possible for chocolate napolitains. Top performance in this segment!

Functional and design features

- > Processing of paper and plastic films for various packaging requirements
- > Quick and repeatable format changeover
- > Continuous film processing at high film speeds
- > Precise guidance of packaging material via film web control
- > Automatic splice unit for enabling continuous operation
- > Optimised machine design to facilitate cleaning and servicing
- > Easy access for operation, maintenance and cleaning
- > No pneumatic components
- > Compact design to facilitate a space-saving system layout
