

FHW

HFFS for the large format range

Packaging of large products or multipacks in flow wrap

The FHW is a horizontal flow wrapping system for the large format range. It is suitable for both cold seal and heat seal applications. With a feed perfectly tailored to the product, the machine packs larger items or multipacks with up to 1,500 products at up to 150 film meters a minute. Both traditional and alternative packaging materials can be easily used on the platform – and at the touch of a button with minimal changeover effort. The re-design features high overall line efficiency and performance as well as maximum format and packaging flexibility. Thanks to a wide range of upstream and downstream equipment from LoeschPack, this is an optimal system component in a line combination.

The FHW packs in the large format range – ideal for large tablets or multipacks.

Efficiency, flexibility and performance

- > Quick and easy format changeover
- > Little cleaning and maintenance effort
- > Product flexibility in the food and non-food sectors
- > Fast and reproducible format changeover
- > Packaging material flexibility for paper and plastics
- > High format flexibility
- > Qualitatively appealing packaging in the high-performance range
- > High film speeds for cold and heat seal films
- > Hygienic and space-saving design
- > Optimized accessibility for operation, maintenance and cleaning
- > Professional advice on packaging style and film structure
- > High efficiency due to autosplice as standard
