

CMC

Display cartoning machine

High performance display cartoner

A highly flexible, compact and powerful display cartoning machine for speeds of up to 60 cartons per minute. The machine is primarily used by the confectionery and food industry for the erection and filling of open display cartons with various compressed products such as roll or stick wrapped goods while accomplishing different packing formations. The machine platform can be used for a wide range of applications thanks to its excellent flexibility. An add-on module allows the processing of non-accumulable articles such as flow packs, three-side seal pouches and slim packs.

Performance and efficiency

- > Machine design meets the latest technical standards
- > Robust machine construction in front plate design
- > Wide format range and superior format flexibility
- > „In-line“ and 90° machine designs
- > Right- and left machine configuration possible
- > Strictly modular design delivers widest range of applications
- > Superior packaging results thanks to „wrap-around“ cartoning
- > Use of flat carton blanks for inexpensive cartoning
- > Very high availability and reliability, especially for line operation
- > Excellent return on investment through short- term amortisation period
