

CMW

Wrap-around cartoning system

Wrap-around cartoning system for the efficient packaging of chocolate bars

The CMW is a cartoning machine for chocolate bar multipacks. Highly flexible and compact display cartoner with a speed of up to 30 cartons a minute. In the standalone variant, pre-packed chocolate bars from one or more packaging machines are brought together and reliably packed in display cartons. The CMW is a response to demand for high performance requirements, and is also suitable as an addition to existing packaging lines. With its small footprint, it is one of the most compact display cartoners available on the market. As part of a combined line, the CMW can also be directly connected to an existing or new LTM-DUO bar wrapping machine using a common controller – for efficiency and space savings.

Performance & Effizienz

- > High OEE (Overall Equipment Effectiveness)
- > Very small footprint for high-performance applications
- > Quick and easy format changeover
- > Vertical startup
- > Fully reproducible settings
- > High reliability, efficiency and availability of the packaging line
- > High flexibility in packaging design
- > Largely tool-free format and belt changes
- > Outstanding maintenance and cleaning accessibility to all working areas
- > Low-maintenance overall design, thus long cleaning and service intervals
- > easyMI Touch Screen for all important information and input
- > Ideally harmonized packaging systems – from the feeding to the display carton
